Table of Contents

Chapter 1: Introduction	1
1.1 Research background and problem definition.....	1
1.1.1 <i>Catastrophe risk and insurance markets worldwide</i>	1
1.1.2 <i>Future global climate change and flood risk in the Netherlands</i>	2
1.1.3 <i>Flood risk insurance in the Netherlands</i>	5
1.1.4 <i>Recent developments in the availability of flood coverage in the Netherlands</i>	8
1.1.5 <i>Potential societal functions of catastrophe risk insurance</i>	10
1.1.6 <i>Challenges facing the insurance sector in managing catastrophe risk</i>	11
1.1.7 <i>Public-private partnership for flood risk insurance</i>	13
1.2 About this thesis.....	14
1.2.1 <i>Objective and research questions</i>	16
1.2.2 <i>Thesis overview and applied methods</i>	17
Chapter 2: A comparative study of public-private catastrophe insurance systems: lessons from current practices	22
2.1 Introduction.....	22
2.2 Insurance systems' components and indicators	24
2.2.1 <i>General characteristics</i>	26
2.2.2 <i>Funding and coverage conditions</i>	26
2.2.3 <i>Incentives for mitigation measures</i>	27
2.3 Comparison of private and public flood insurance systems.....	27
2.3.1 <i>General characteristics</i>	29
2.3.2 <i>Funding</i>	30
2.3.3 <i>Mitigation</i>	31
2.4 Comparison of public-private insurance systems	32
2.4.1 <i>Flood insurance</i>	32
2.4.2 <i>Earthquake risk insurance</i>	39

2.5	Discussion: lessons for establishing a natural disaster insurance system	44
2.5.1	<i>Mandatory insurance and the market penetration</i>	45
2.5.2	<i>Costs of the insurance</i>	45
2.5.3	<i>Financing the insurance system</i>	46
2.5.4	<i>Policies and incentives for mitigating catastrophe damage</i>	47
2.6	Conclusion	49
Chapter 3: Estimation of insurance premiums for coverage against natural disaster risk: an application of Bayesian inference		51
3.1	Introduction.....	51
3.2	Data and methods.....	53
3.2.1	<i>Data</i>	55
3.2.2	<i>Applying Bayesian inference for estimation of the tail parameter</i>	58
3.2.3	<i>Simulation of flood damage data and the fitting of probability density curves</i>	62
3.2.4	<i>Estimation of flood insurance premiums</i>	63
3.3	Results.....	65
3.4	Discussion	73
3.4.1	<i>Main differences between the flood insurance premiums</i>	73
3.4.2	<i>Bayesian Inference method</i>	74
3.4.3	<i>Implications for insurers</i>	75
Appendix 3A: Aandacht voor Veiligheid and Veiligheid Nederland in Kaart input data		79
Appendix 3B: Data truncation: the derivation of minimum and maximum damage		81
Appendix 3C: Estimation of hyper-parameters and sufficient statistics		82
Appendix 3D: Deriving the posterior distribution from the Pareto likelihood and Gamma prior		83
Appendix 3E: The bounded Pareto distribution.....		84
Appendix 3F: Derivation of the actuarial equivalent premium.....		86
Chapter 4: Risk allocation in a public-private catastrophe insurance system: an actuarial analysis of deductibles, stop-loss, and premiums		87

4.1	Introduction.....	87
4.2	Methodology and data.....	90
4.2.1	<i>Basic concept</i>	90
4.2.2	<i>Flood risk estimates (Step 1)</i>	94
4.2.3	<i>Tail Value at Risk estimates (Step 2)</i>	95
4.2.4	<i>RMIC and RMRC estimates (Step 3)</i>	96
4.2.5	<i>Premium estimation and relation with coverage (Step 4)</i>	98
4.2.6	<i>Relation between coverage and premiums (Step 5)</i>	100
4.3	Results.....	100
4.3.1	<i>Results for dyke-ring areas 7, 14 and 36</i>	100
4.3.2	<i>Results for all 53 dyke-ring areas</i>	107
4.4	Discussion	112
4.4.1	<i>The trade-off between the required maximum insurance and reinsurance coverage and the corresponding insurance and reinsurance premiums</i>	112
4.4.2	<i>Main differences between the risk averse and the risk neutral premiums</i>	114
4.4.3	<i>Allocation of risk and premiums among the stakeholders</i>	114
4.4.4	<i>Implications for the insured, the insurers, and the reinsurers</i>	115
4.5	Conclusions and recommendations.....	118
	Appendix 4A: Derivation of the deductible and stop-loss levels.....	121
	Appendix 4B: Total premium and coverage estimates per dyke-ring area	122
	Chapter 5: Influence of climate change and socioeconomic development on catastrophe insurance: a case study of flood risk scenarios in the Netherlands	124
5.1	Introduction.....	124
5.2	Methodology	126
5.2.1	<i>Study area</i>	126
5.2.2	<i>Methodology</i>	127
5.3	Results and discussion	135

5.3.1	<i>Flood damage results</i>	135
5.3.2	<i>Insurance premiums</i>	139
5.3.3	<i>Reinsurance premiums</i>	141
5.4	Discussion	143
5.4.1	<i>Impact of climate change and socioeconomic development on flood risk</i>	143
5.4.2	<i>Differences between the risk averse and the risk neutral (re)insurance premiums</i>	145
5.4.3	<i>Main implications of the results for flood risk insurability</i>	146
5.5	Conclusions and recommendations	148
	Appendix 5A: Relationship between sea level rise and flood return periods	151
	Appendix 5B: Relation between sea level rise and flood damage	152
	Appendix 5C: Projections of future flood damage in 2040 and 2100 under 24 and 85 cm sea level rise	153
	Appendix 5E: Scaling factors of the projected increase in flood damage	155
	Appendix 5F: Projections of number of houses within each dyke-ring area by 2040	156
	Appendix 5G: Required maximum insurance coverage	158
	Appendix 5H: Required maximum reinsurance coverage corresponding to the risk averse and risk neutral reinsurance premiums	160
	Chapter 6: Conclusions	162
	Part I: Qualitative assessment	163
	Part II: Quantitative assessment	166
	Recommendations for future research	171
	References	174
	Nederlandse samenvatting (Dutch summary)	183
	Doel van dit onderzoek	185
	Samenvatting deel I	186
	Samenvatting deel II	186
